

Analog Styles (CSS)

(Pairs) Students practice thinking in CSS by describing visuals in terms of CSS rules.

Time: 10 minutes

Core concept: How real visual concepts can be translated into CSS rules.

Materials:

- Drawing tools

Procedure:

- Divide students into pairs.
- Without letting the other student see, student one takes the pencil and paper and draws a stylized version of a single word.
- Then, they must write out a series of CSS rules that describe the art they just made.
- Student one must then tell student two the word they chose, and give student two the CSS rules.
- Student two must then try to re-draw, sight unseen, what student one drew by interpreting the CSS rules and applying them to the word.
- Switch roles and repeat.
