

Head & Body (separation, html, hierarchy)

(Groups) Students put back together cut out pieces of a human body with an oversized head, pieces that represent different tags that belong inside the head and body of an HTML page.

Time: 10 minutes

Core concept: What belongs in the head and what belongs in the body of an HTML page.

Materials:

- Cut out body outline
- Cut out pieces

Procedure:

- Students are divided into groups
- Each group is given a puzzle set. Each puzzle set includes a head/body outline and the cut up pieces that are arranged inside.
- The group is told to arrange the pieces the right way inside the outline to see the right way to organize the tags.
- The correct arrangement will be self evident, so students don't need to check the work.
