

Pass out all the badges from the worksheet. Each student will have multiple badges. These badges identify what objects they have. The teacher will then write the first selector below on the board. Students must determine whether or not their badges match the selector being asked for. Repeat for following selectors.

`$('.blue')`

`$('.star')`

`$('.blue.star')`

`$('.blue, .star')`

`$('#R')`

`$('.red')`

`$('.circle')`

`$('.red .circle')`

`$('.circle .red')`

`$('.red, .green .triangle')`

`$('.blue, #J')`

`$('#J.orange')`

`$('.orange .circle')`

`$('.yellow.triangle#C')`

`$('.green, #N')`

`$('.red, .star, #1')`

`$('#G')`

`$('#b')`

`$('#W'.blue')`

`$('#F, #a, #3.red')`

`$('.purple, .pentagon, #P')`

Feel free to make your own with my random selector generator. It doesn't give you the final form, but just a random choice of one color one shape and one id.
